

For Horses

Stall Freshener:

One half inch of Zeolite in a 14+40 size is laid down in the stall after cleaning. It is then reapplied each time the stall is cleaned or at regular intervals on top of the manure. The benefits are:

- Adsorbs moisture and creates a drier environment that reduces hoof problems and flies.
- Adsorbs and holds ammonium, the main source of odor.
- The Zeolite and manure make an excellent soil amendment.

Horse Feed

Horses are fed from ½ to 2% Zeo-Feed of 14+40 size in mash feeds, or -100 mesh in pelletized rations. The benefits are:

- Increased rate of gain.
- Lowers the conversion ratio. Less feed per pound of gain.
- Improved nutrient digestion.
- Reduced Scours.
- Reduces cribbing (chewing on wood).
- Improves bone growth.
- Improves color of coat.
